

BioAtla Announces Upcoming Poster Presentation at the IASLC 2024 Hot Topic in Basic & Translational Science Meeting

December 10, 2024 at 8:00 AM EST

SAN DIEGO, Dec. 10, 2024 (GLOBE NEWSWIRE) -- BioAtla, Inc. (Nasdaq: BCAB), a global clinical-stage biotechnology company focused on the development of Conditionally Active Biologic (CAB) antibody therapeutics for the treatment of solid tumors, today announced a poster presentation at the upcoming International Association for the Study of Lung Cancer (IASLC) 2024 Hot Topic in Basic & Translational Science Meeting to be held in Washington, DC from December 13–15, 2024.

Presentation Details:

Title:	Characterization of Mutated KRAS Genotype and Clinical Outcomes in Patients With Advanced NSCLC Treated With Mecbotamab Vedotin, a CAB-AXL-ADC
Authors:	Julia Rotow, Grace K. Dy, Edwin Yau, Elaine Shum, Mariam Alexander, Karen L. Reckamp, Roland Leung, Dariusz M. Kowalski, Jose Fuentes Pradera, Jon Zugazagoitia Fraile, Kyechin Chen, Kartik Aysola, D. Ross Camidge
Poster Number:	PP01.03
Session Type:	Poster Reception
Session Date and Time:	Saturday, December 14, 2024 from 5:40 P.M. – 6:40 P.M. ET

A copy of the presentation materials can be accessed on the "[Publication](#)" section of the Company's website at www.bioatla.com once the presentation has concluded.

About BioAtla®, Inc.

BioAtla is a global clinical-stage biotechnology company with operations in San Diego, California, and in Beijing, China through our contractual relationship with BioDuro-Sundia, a provider of preclinical development services. Utilizing its proprietary CAB technology, BioAtla develops novel, reversibly active monoclonal and bispecific antibodies and other protein therapeutic product candidates. CAB product candidates are designed to have more selective targeting, greater efficacy with lower toxicity, and more cost-efficient and predictable manufacturing than traditional antibodies. BioAtla has extensive and worldwide patent coverage for its CAB technology and products with greater than 780 active patent matters, more than 500 of which are issued patents. Broad patent coverage in all major markets include methods of making, screening and manufacturing CAB product candidates in a wide range of formats and composition of matter coverage for specific products. BioAtla has two first-in-class CAB programs currently in Phase 2 clinical testing, mecbotamab vedotin, a novel conditionally active AXL-targeted antibody-drug conjugate (CAB-AXL-ADC), and ozuriftamab vedotin, a novel conditionally active ROR2-targeted antibody-drug conjugate (CAB-ROR2-ADC). The Phase 2 stage CAB-CTLA-4 antibody, evalstotug, is a novel CTLA-4 inhibitor designed to reduce systemic toxicity and potentially enable safer combination therapies with checkpoint inhibitors such as anti-PD-1 antibody. The company's first dual CAB bispecific T-cell engager antibody, BA3182, is currently in Phase 1 development. BA3182 targets EpCAM, which is highly and frequently expressed on many adenocarcinomas while engaging human CD3 expressing T cells. To learn more about BioAtla, Inc. visit www.bioatla.com.
